

1 **Table 3: Model-derived secondary pharmacokinetic parameters of isoniazid, rifampicin, and pyrazinamide with and without**
2 **metformin co-administration.**

3

		No metformin		Metformin	
		AUC _{0-24h} (mg*h/L)	C _{max} (mg/L)	AUC _{0-24h} (mg*h/L)	C _{max} (mg/L)
Isoniazid	Rapid/intermediate acetylators	10.8 [20.9%]	2.96 [54.7%]	8.26 [24.6%]	3.00 [23.6%]
	Slow acetylators	25.7 [18.4%]	4.48 [24.4%]	26.5 [35.0%]	4.30 [37.6%]
Rifampicin		35.9 [49.8%]	6.64 [32.7]	27.1 [60.4%]	5.06 [38.7%]
Pyrazinamide		419 [31.7%]	38.1 [24.9%]	370 [36.4%]	36.8 [23.8%]
Values are presented as geometric mean (GM) with coefficient of variation (%CV). Area under the curve (AUC) and maximum concentration (C _{max}).
